Online information security training for eployees

✓ **Protect your company from attacks – train your employees in information security.**

✓ **Our online data security courses are comprehensive as well as flexible and easily fit into your work day.**

✓ **Each participant will receive a certificate and progress is easily managed.**

The challenge of employee training

The best firewalls and most refined security guidelines don't bring you much if your employees aren't trained in IT, data and information security. Your system and information security are best ensured when technology, processes and people are in top form.

But training your employees can be challenging, due to a lack of motivation or difficult content.

Our online courses can help overcome this challenge.

Practical online training

Your employees can learn online whenever it best suits them during their work day. High quality multimedia teaching materials provide the necessary training content, including interactive practice questions to reinforce learning. Employees receive a certificate at the end after successful completion of a test.

You can monitor employee training progress at any time and verify compliance with training requirements.

Information security training made simple

The online training in information security sensitizes your employees in critical topics with one clear goal: They will know what they can do themselves to ensure information and system security.

Approximately within an hour, your employees will get the basics in information security, how typical attacks occur and what they can do against them.
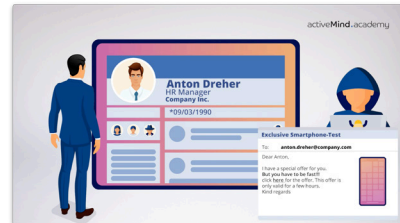

1st lesson: What does information security have to do with me?
Why employees are one of the three pillars of information security and why an attack on IT affects everyone.

2nd lesson: Phishing
What is a phishing attack? How does one recognise a phishing message? What should an employee do – and definitely not do?

3rd lesson: Cloud services
What's the difference between the public and the private cloud? Why are certain cloud services not set up in companies? And what actually happens with cloud data?

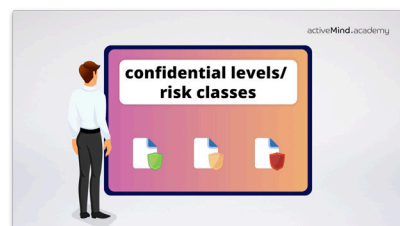

4th lesson: Passwords
Why are simple passwords so easy for hackers to crack? How can I think up really secure passwords and then remember them?

5th lesson: Risk classes
Why is information categorised in risk or confidentiality classes? What are these classes anyway? How and in which risk class do employees protect information?

Final test
The purpose of the final test is to show proof of understanding. Ten questions from the five lessons must be answered. Those who get at least 60% correct can download a certificate showing successful course completion.

Improved security comes with trained employees

People are the most important factor in information security next to technology (firewalls, virus protection, etc.) and organisation (guidelines etc.). Trained employees are critical to protecting your company from hackers and other attackers.

Set up our practical and effective online information security training now for your employees. Increase awareness of the typical dangers in IT use and working with data.

Your customers, business partners and employees will thank you.

Fair prices for any number of employees

The licenses for the online courses are valid for one year after booking. Simply book as many licenses as you need for your employees. Subsequent bookings are possible at any time.

	Data protection	Information security	BEST DEAL Data protection + information security
10 license pack	EUR 170	EUR 170	EUR 300
20 license pack	EUR 320	EUR 320	EUR 580
50 license pack	EUR 750	EUR 750	EUR 1,400
100 license pack	EUR 1,400	EUR 1,400	EUR 2,700
200 license pack	EUR 2,600	EUR 2,600	EUR 5,000
500 license pack*	EUR 6,000	EUR 6,000	EUR 11,500

For companies with more than 500 employees we will be happy to create a customised offer.
