

Online data protection training for employees

- ✓ **Fulfil GDPR requirements by training your employees in data protection.**
- ✓ **Our high quality training courses are flexible to fit into your work day.**
- ✓ **A certificate is provided as proof in the end and participation is easy to manage.**

Challenges when training employees

Per the General Data Protection Regulation (GDPR), all employees who have access to personal data must be trained regularly in data protection.

Employee training can be challenging, due to a lack of motivation or the complexity of the subject.

Online training is an optimal solution to meet this challenge.

Practical online training

Your employees can fit the training into their work day when it best suits them. High quality multimedia teaching materials provide the necessary training content, including interactive practice questions to reinforce learning. Employees receive a certificate at the end after successful completion of a test.

You can monitor employee training progress at any time and verify compliance with GDPR accountability requirements.

Data protection training made simple

In the online training in data protection, your employees will learn the essentials in lawful processing of personal data: GDPR basics, technical and organisational measures, and handling a data protection emergency.

The training goal is for your employees to know what they can do themselves to protect the personal data of company employees, customers and business partners.

1st lesson: Why data protection?

What are personal data? Why do they need to be protected? What important role does the employee play?

2nd lesson: The GDPR

Why is there a General Data Protection Regulation (GDPR)? What controls this EU regulation? How does it differ from other data protection laws?

3rd lesson: Principles and data subject rights

What are the GDPR principles for personal data collection and processing? What do these principles mean in practice? What rights do data subjects have?

4th lesson: TOM

What technical and organisational measures (TOM) are used to protect personal data? How can they be verified? And what happens when service providers or processors are contracted?

5th lesson: Data protection emergency

What is a data protection emergency or data breach? How should computer viruses, hacker attacks and lost or stolen log in data be handled? What should employees definitely do and not do?

Final test

The purpose of the final test is to show proof of understanding. Ten questions from the five lessons must be answered. Those who get at least 60% correct can download a certificate showing successful course completion.

The best data protection comes with trained employees

Even if your technical measures are good, data breaches are hard to avoid if your employees aren't trained.

Set up our practical and effective online data protection training now for your employees. Increase awareness of handling sensitive data and fulfil your GDPR compliance as well.

Your customers, business partners and employees will thank you.

Fair prices for any number of employees

The licenses for the online courses are valid for one year after booking. Simply book as many licenses as you need for your employees. Subsequent bookings are possible at any time.

	Data protection	Information security	Data protection + information security
Up to the 99 th license you pay per employee:	17 €	17 €	30 €
From the 100 th to the 499 th license you pay per employee:	13 €	13 €	20 €
From the 500 th license you pay per employee:	10 €	10 €	15 €
1,000 or more licences	<i>Prices available upon request</i>	<i>Prices available upon request</i>	<i>Prices available upon request</i>
